TD-03-PYTHON-GIT-LINUX

Daniil Vedishchev

November 2026

1 Verify Git identity

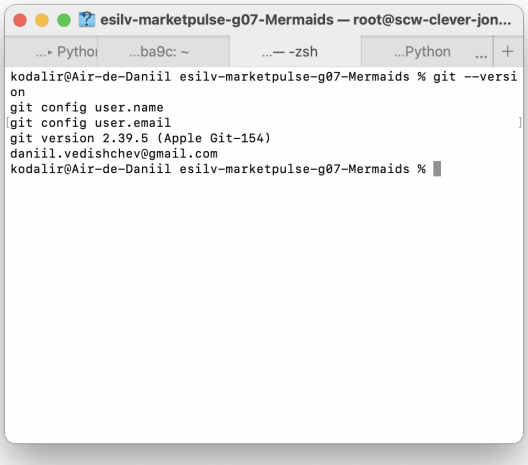

Figure 1: Git Identity Output

2 Inspect the real TD02 changes

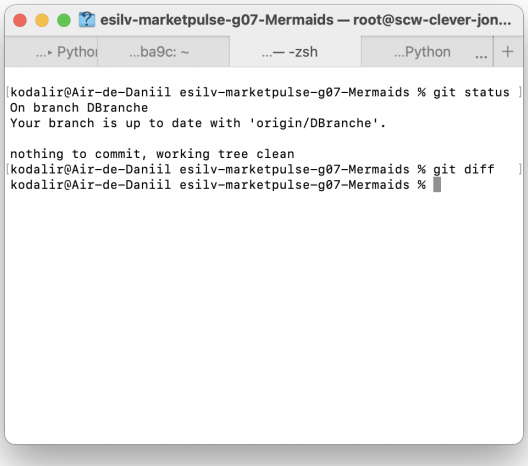

Figure 2: Git (status, diff)

- **Which files are modified?**
  No files are currently modified. The latest commit has already been pushed.

- **Which lines were added?**
  No lines have been added since the last commit.

- **Which lines were removed?**
  No lines have been removed since the last commit.

3 Understand git status and git diff

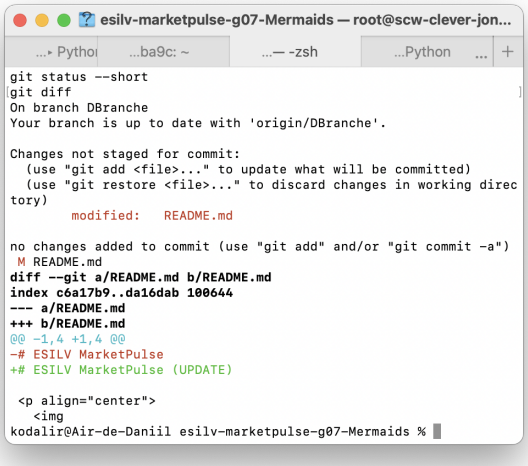

Figure 3: Git status and git diff

4 Stage the intended change

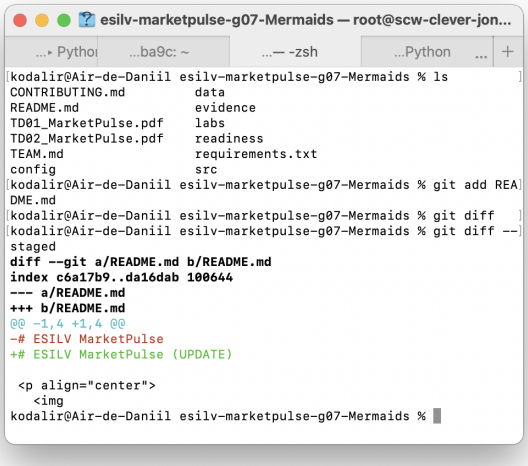

Figure 4: Difference between git diff and git diff –staged

5 Create the first meaningful commit

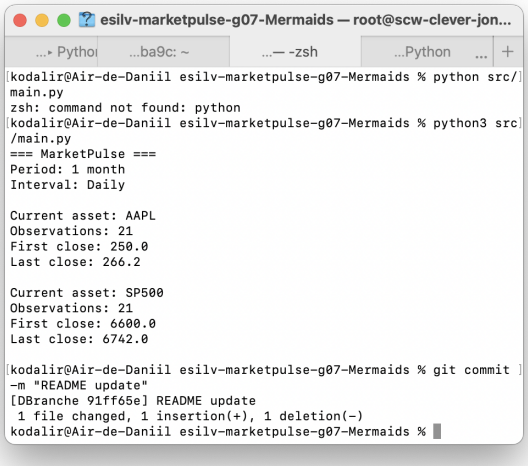

Figure 5: Meaningful commit

6 Read the local history

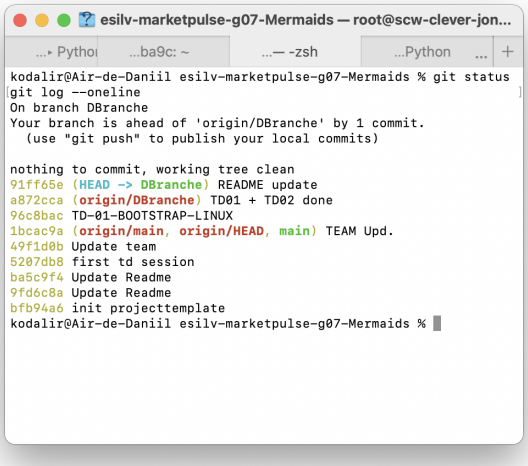

Figure 6: Read the local history

7 CORE validation

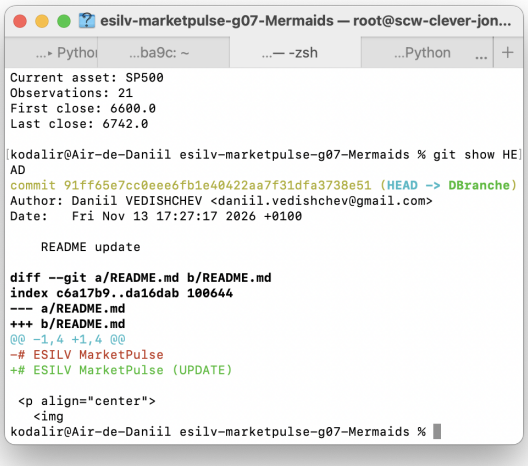

Figure 7: Core validation
